

## Supplementary Material

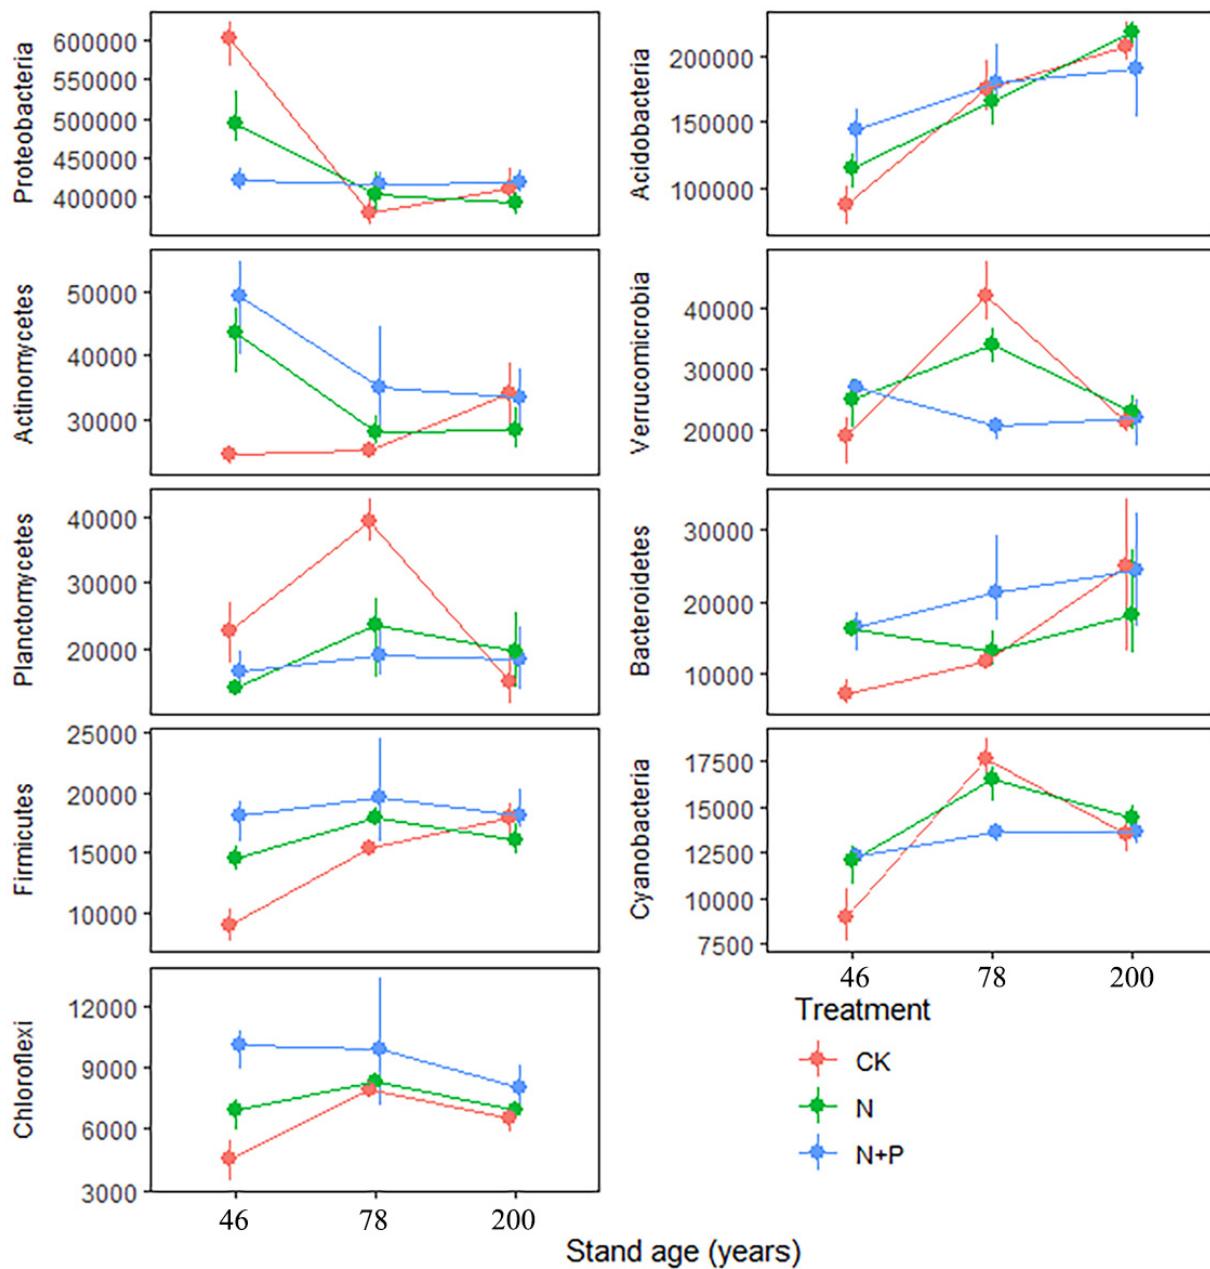

**Fig. S1** - The map of plot distribution.

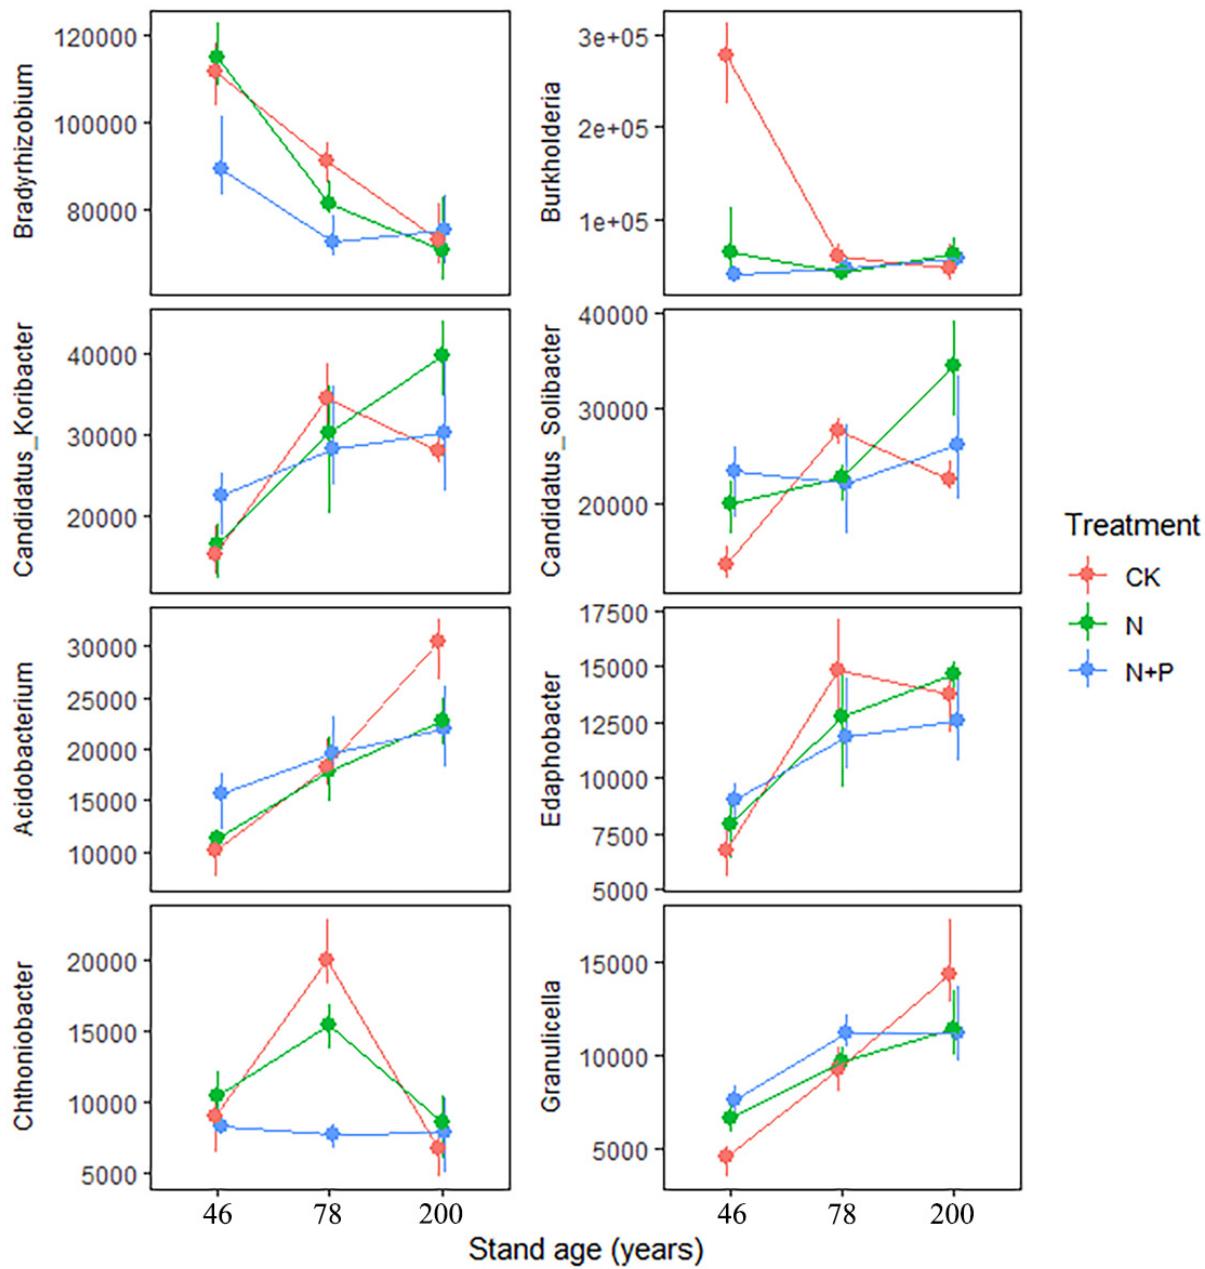

**Fig. S2** - Rarefaction curves of bacterial communities (n=9).

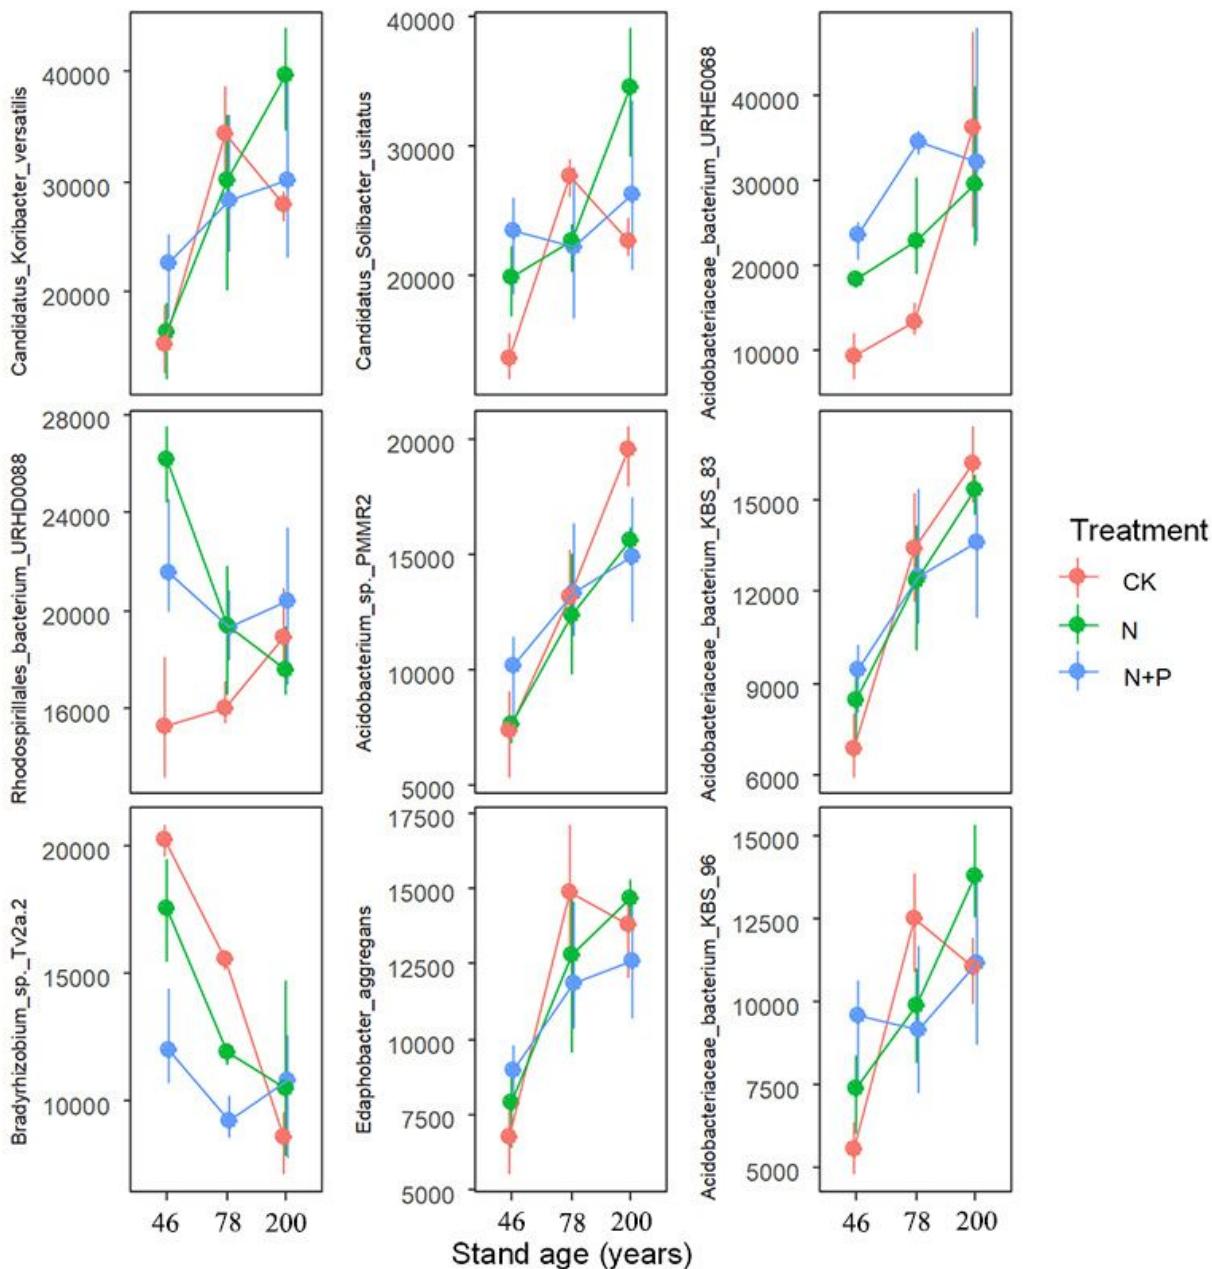

**Fig. S3** - Interactive effects of treatment and stand age on the unigenes abundance of soil bacterial dominate phylum. Treatments are control (CK), nitrogen addition (N), and N and phosphorus addition (N+P). Values are bootstrapped means  $\pm$  95% confidence intervals (CIs) for individual samples and their sum ( $n=9$ ). Difference between stand ages, or treatments is significant at  $\alpha = 0.05$  if their CIs do not overlap the other's mean.

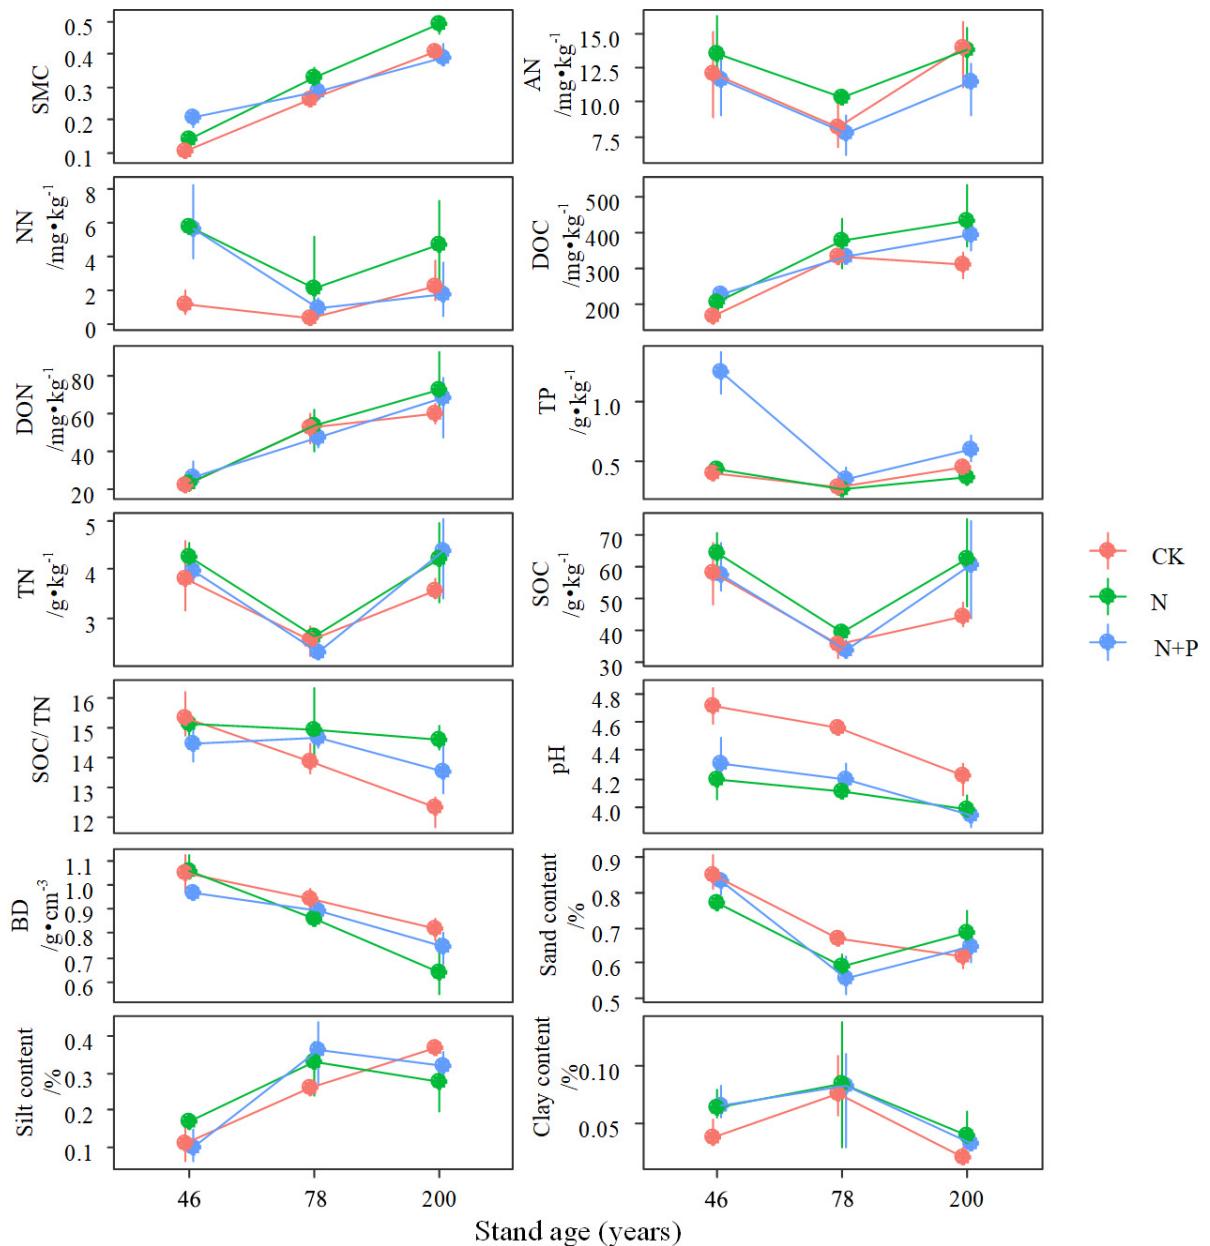

**Fig. S4** - Interactive effects of treatment and stand age on the unigenes abundance of soil bacterial dominate genus. Treatments are control (CK), nitrogen addition (N), and N and phosphorus addition (N+P). Values are bootstrapped means  $\pm$  95% confidence intervals (CIs) for individual samples and their sum ( $n=9$ ). Difference between stand ages, or treatments is significant at  $\alpha = 0.05$  if their CIs do not overlap the other's mean.

**Fig. S5** - Interactive effects of treatment and stand age on the unigenes abundance of soil bacterial dominate species. Treatments are control (CK), nitrogen addition (N), and N and phosphorus addition (N+P). Values are bootstrapped means  $\pm$  95% confidence intervals (CIs) for individual samples and their sum (n=9). Difference between stand ages, or treatments is significant at  $\alpha = 0.05$  if their CIs do not overlap the other's mean.

**Fig. S6** - Interactive effects of treatment and stand age on soil parameters. Treatments are control (CK), nitrogen addition (N), and N and phosphorus addition (N+P). Values are bootstrapped means  $\pm$  95% confidence intervals (CIs) for individual samples and their sum ( $n=9$ ). Difference between stand ages, or treatments is significant at  $\alpha = 0.05$  if their CIs do not overlap the other's mean. SMC, soil moisture content; AN, ammonium; NN, nitrate; C/N, SOC/ TN; SOC, soil organic carbon; TN, soil total nitrogen; TP, total phosphorus; DOC, dissolved organic carbon; DON, dissolved organic nitrogen; Sand, soil sand content; Clay, soil clay content; Silt, soil silt content; BD, bulk density.

**Tab. S1** - Soil texture analysed by the fractionation test described by Hunt & Gilkes (1992).

Plot	Stand age	Treatment	Sand /%	Silt /%	Clay /%	Soil texture
1	46	CK	83.15	11.53	5.32	sand loam
2	46	CK	90.80	6.29	2.91	sand
3	46	CK	81.08	15.97	2.95	sand loam
4	46	N	79.49	14.98	5.53	sand loam
5	46	N	76.39	18.06	5.56	sand loam
6	46	N	75.16	16.99	7.84	sand loam
7	46	N+P	84.56	9.56	5.88	sand loam
8	46	N+P	79.49	14.98	5.53	sand loam
9	46	N+P	85.81	5.95	8.24	sand loam
10	80	CK	65.22	23.80	10.98	silty loam
11	80	CK	67.84	26.13	6.03	silty loam
12	80	CK	66.90	27.46	5.63	silty loam
13	80	N	57.28	34.13	8.59	silty loam
14	80	N	62.21	23.96	13.82	silty loam
15	80	N	57.01	40.14	2.85	silty loam
