

Supplementary Material

Tab. S1 - Fields of the Italian fuel characteristics dataset. (*): All loads are on a dry weight basis, *i.e.*, dehydrated.

Field	Description	Units or Categories	Data format
<i>ID</i>	Unique identifier code of each fuel observation	<ul style="list-style-type: none"> - 1st and 2nd position: fuel complex identifier (LI = litter only; GR = grass and grass; GS = grass + shrubs; SH = shrubs; LS = litter + grass + shrubs) - 4th to 6th position: study site identification code. - 8th and 9th position: numeric code that identifies a fuel sample within an individual study site. The code starts from 01 for each site 	Alphanumeric
<i>FuelComplex</i>	Broad group based on the main fuel type responsible for fire spread	- LI = litter only; GR = grass only; SH = shrubs only; GS = grass + shrubs; LS = litter + grass + shrubs	Character string, up to 2 characters
<i>Site</i>	Unique identifier code of each study site (samples within 200 m distance at a location)	Sites are 337	Numeric, integer
<i>Sample</i>	Unique identifier code of each sample at a study site	Number of samples at a study site range from 1 to 15	Numeric, integer
<i>SamplingSeason</i>	Season in which the fuel sampling was carried out. Season corresponds to the typical environment-specific fire season, to describe fuel characteristics dynamic (e.g. level of grass curing) in the nature of their flammable status.	Classes are: summer - winter	Character string, up to 7 characters
<i>Wduff</i>	Duff fuel load* (includes the lower litter)	Mg / ha	Numeric, integer
<i>W1h</i>	Dead fuels upper litter 0-6 mm (i.e. 1h fuel load)	Mg / ha	Numeric, integer
<i>W10h</i>	Dead fuels 6-25 mm (i.e. 10h fuel load)	Mg / ha	Numeric, integer
<i>W100h</i>	Dead fuel 25-75 mm (i.e. 100h fuel load)	Mg / ha	Numeric, integer
<i>WGr</i>	Live grass <6 mm	Mg / ha	Numeric, integer
<i>WSh1h</i>	Live shrubs <6 mm	Mg / ha	Numeric, integer
<i>WSh10h</i>	Live shrubs 6-25 mm	Mg / ha	Numeric, integer

Ascoli D, Vacchiano G, Scarpa C, Arca B, Barbati A, Battipaglia G, Elia M, Esposito A, Garfi V, Lovreglio R, Mairota P, Marchetti M, Marchi E, Meytre S, Ottaviano M, Pellizzaro G, Rizzolo R, Sallustio L, Salis M, Sirca C (2020). **Harmonized dataset of Italian surface fuels under Alpine, Temperate and Mediterranean conditions. A synthesis supporting fire management**

Field	Description	Units or Categories	Data format
<i>Wtot</i>	Total fuel load excluding duff	Mg / ha	Numeric, integer
<i>Cdead</i>	Cover of 1h, 10h and 100h fuels	%	Numeric, integer
<i>CGr</i>	Cover of grass	%	Numeric, integer
<i>CSh</i>	Cover of shrub	%	Numeric, integer
<i>Ddead</i>	Depth of 1h, 10h and 100h fuels	Cm	Numeric, integer
<i>DGr</i>	Depth of grass	Cm	Numeric, integer
<i>DSh</i>	Depth-Height of shrub fuels	Cm	Numeric, integer
<i>CanCov</i>	Tree layer canopy cover	%	Numeric, integer
<i>FuelBed</i>	Pre-defined fuelbed partly based on EFFIS fuel map classes adapted to Italian specificity (see Table 2)	Fuelbeds are organized in 19 classes	Character string
<i>CodFuelBed</i>	Numerical code for each fuelbed	Progressive number from 1 to 17	Numeric, integer
<i>EFFIS_FuelClass</i>	Fuel map class according to European Forest Fire Information System (EFFIS 2017) classification	The EFFIS fuel map is organized in 42 classes	Character string
<i>CodCorine</i>	Code of the Corine land cover class IV level	IV level Corine Land Cover	Character string
<i>ForTypeEU</i>	European Forest Types	European Forest Types classification (Barbati et al. 2014)	Character string
<i>INFC_cat</i>	Forest category of the Italian National inventory	The Italian inventory has 17 forest categories	Character string
<i>Description_IT</i>	Vegetation type description for Italian users	Vegetation classification according to regional Forest and Pastoral Types	Character string
<i>Clim_kgz</i>	Köppen-Geiger climate class	Climate classes according to Kottek et al. (2006)	Character string
<i>Bt</i>	Bioclimates of the worldwide bioclimatic classification system	Classes identified by taking into consideration the macrobioclimate, and ranges in the gradients of the annual ombrothermic index and the simple continentality index according to Rivas-Martinez et al. (2011)	Numeric, integer
<i>Ct</i>	Continentality type of the worldwide bioclimatic classification system	Classes identified by ranges in the gradient of the simple continentality index	Numeric, integer
<i>Ot</i>	Ombrotype of the worldwide bioclimatic classification	Classes identified by ranges in the gradient of the annual ombrothermic	Numeric, integer

Ascoli D, Vacchiano G, Scarpa C, Arca B, Barbati A, Battipaglia G, Elia M, Esposito A, Garfi V, Lovreglio R, Mairota P, Marchetti M, Marchi E, Meytre S, Ottaviano M, Pellizzaro G, Rizzolo R, Sallustio L, Salis M, Sirca C (2020). **Harmonized dataset of Italian surface fuels under Alpine, Temperate and Mediterranean conditions. A synthesis supporting fire management**

Field	Description	Units or Categories	Data format
	system	index according to Rivas-Martinez et al. (2011)	
<i>Tt</i>	Thermotype of the worldwide bioclimatic classification system	Classes identified by identified by ranges in the gradients of the compensated thermicity index and the yearly positive temperature according to Rivas-Martinez et al. (2011)	Numeric, integer
<i>Slope</i>	Sampling point slope	%	Numeric, integer
<i>Aspect</i>	Sampling point aspect	°North	Numeric, integer
<i>Elev</i>	Sampling point elevation	meters a.s.l.	Numeric, integer
<i>Coord_N</i>	Latitude	deg/min/sec	Numeric, integer
<i>Coord_E</i>	Longitude	deg/min/sec	Numeric, integer
<i>UTM_x</i>	Latitude	UTM_WGS84 (EPSG)	Numeric, integer
<i>UTM_y</i>	Longitude	UTM_WGS84 (EPSG)	Numeric, integer
<i>Region</i>	Italian administrative Region	Name of the Region	Character string
<i>Observer</i>	Surname of the observer	-	Character string

Ascoli D, Vacchiano G, Scarpa C, Arca B, Barbati A, Battipaglia G, Elia M, Esposito A, Garfi V, Lovreglio R, Mairota P, Marchetti M, Marchi E, Meytre S, Ottaviano M, Pellizzaro G, Rizzolo R, Sallustio L, Salis M, Sirca C (2020). **Harmonized dataset of Italian surface fuels under Alpine, Temperate and Mediterranean conditions. Tab. S2 - Foliage and branches fuel load (Mg ha⁻¹) and source of data by fuel complex.

Fuelbed	Foliage	Branches	Sources
7. Montane beech	3.08	9.54	Bartelink 1997
8. Compact mesophytic broadleaves 9. Porous thermophilous broadleaves	4.40	6.60	Bovio 1996
10. Mediterranean evergreen broadleaves	6.02	9.17	Lledò et al. 1992
11. Long broadleaved litter	3.29	10.8	Leonardi et al. 1996, Cutini 2000
13. Alpine and Mediterranean short needled conifer	12.4	-	Lehtonen 2005
14. Montane long needled conifer 15. Montane long needled conifer understory with shrubs	4.80-11.37	7.20	Bovio 1996, Riano et al. 2004
16. Mediterranean long needled conifer 17. Mediterranean long needled conifer understory with shrubs	6.1-7.54	6.22	Mitsopoulos and Dimitrakopoulos 2007, Fernández-Alonso et al. 2013

Fig. S1 – Scheme showing the structure of the dataset as regards quantitative variables characterizing each fuel observation. Variables name abbreviations are described in Tab. S1.

Fig. S2 – Photos describing the 19 fuelbeds included in the dataset.

1. Sparse and very short grasslands

2. Continuous short grasslands

3. Continuous tall Mediterranean grasslands

4. Temperate and Alpine heathlands

5. Short Mediterranean shrublands and garrigues

6. Tall Mediterranean shrublands and heathlands

Fig. S2 – (continued).

7. Montane beech litter

8. Compact mesophitic broadleaved litter

9. Porous thermophilous broadleaved litter

10. Mediterranean evergreen broadleaved litter

11. Long broadleaved litter

12. Eucalyptus litter

Fig. S2 – (continued).

13. Alpine and Mediterranean short needled conifer litter

14. Montane long needled conifer litter

15. Montane long needled conifer understory with shrubs

16. Mediterranean long needled conifer litter

17. Mediterranean long needled conifer understory with shrubs

18. Riparian vegetation

Fig. S2 – (continued).

19. Aquatic marshes
