

Supplementary Material

Fig. S1 - Variance inflation factors among variables used in the full model.

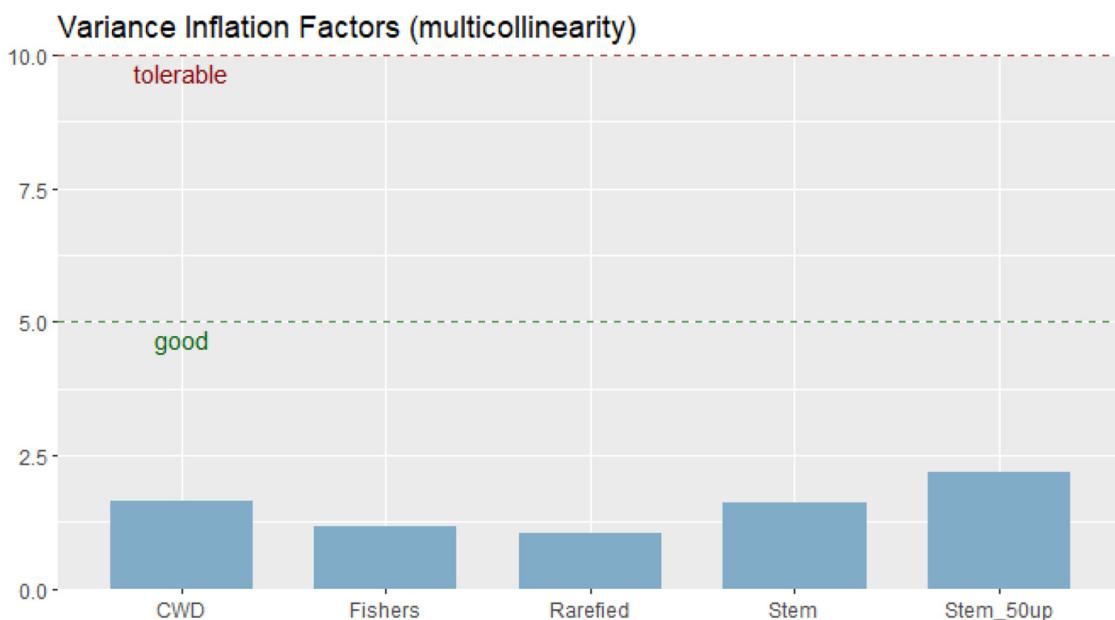

Fig. S2 - Nonnormality of residuals between theoretical quantiles and studentized residuals of the full model.

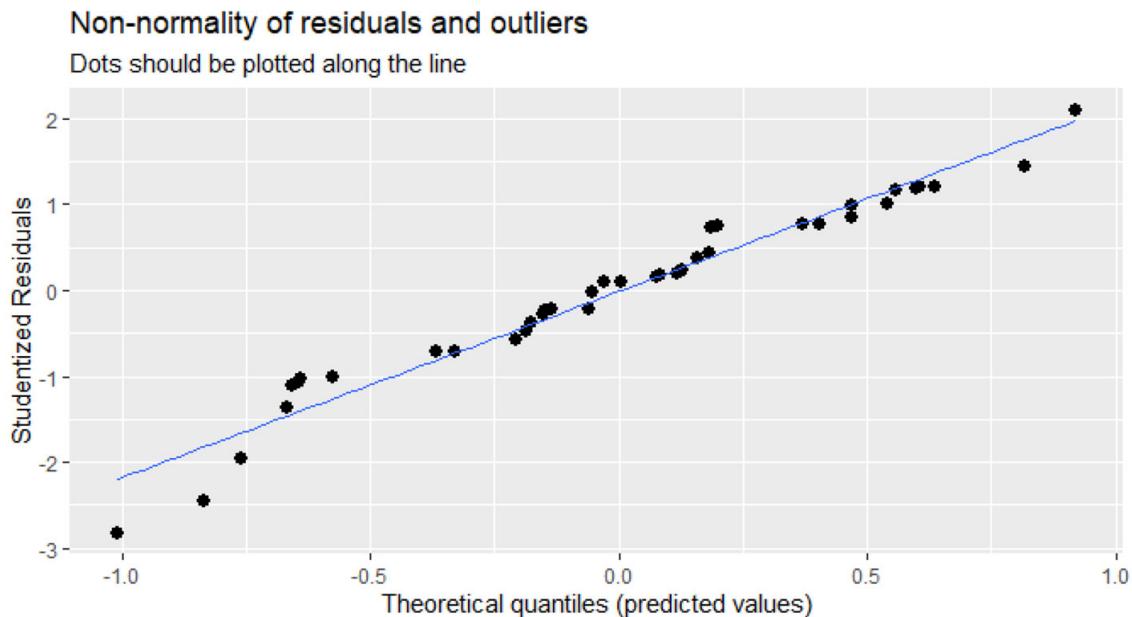

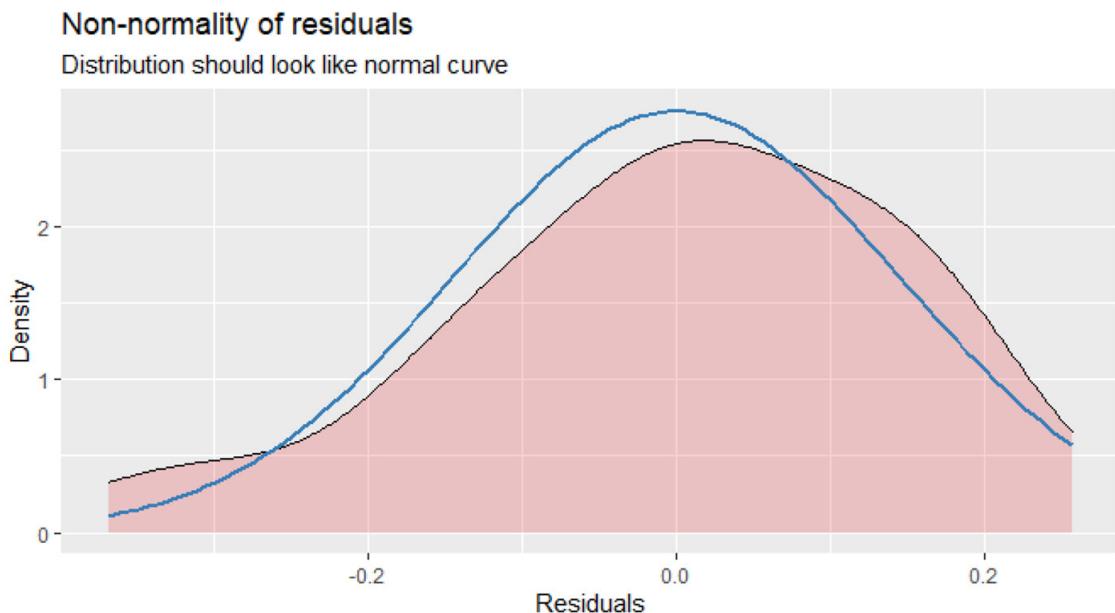

Fig. S3 - Distribution of residuals of the full model.

Tab. S1 - Species, family, basal area (m^2), cumulative basal area (m^2), above-ground biomass (Mg), cumulative above-ground biomass (Mg) for each species found in Takokak NR, West Java, Indonesia.

No	Species	Family	Basal area (m^2)	Cumulative basal area (m^2)	AGB (Mg)	Cumulative AGB (Mg)
1	<i>Liquidambar excelsa</i>	Altingiaceae	25.930	25.930	370.672	370.672
2	<i>Schima wallichii</i>	Theaceae	20.334	46.264	285.060	655.732
3	<i>Lithocarpus</i> sp.	Fagaceae	6.994	53.258	91.506	747.237
4	<i>Castanopsis javanica</i>	Fagaceae	2.693	55.951	38.051	785.288
5	<i>Rhodamnia cinerea</i>	Myrtaceae	2.163	58.115	36.177	821.465
6	<i>Dipterocarpus retusus</i>	Dipterocarpaceae	2.060	60.174	29.340	850.805
7	<i>Sterculia</i> sp.	Malvaceae	1.650	61.824	13.090	863.895
8	<i>Syzygium lineatum</i>	Myrtaceae	1.513	63.337	16.657	880.553
