Tab. S1 – List of species surveyed in an area undergoing ecological restoration for 10 years, implemented by different restoration techniques in an experimental area at the Monteiro Lobato Gas Treatment Unit (UTGCA/Petrobras), Caraguatatuba, São Paulo – Brazil. Legend: DS: Dispersion Syndromes (ZOO = Zoochory, Ane = Anemochory, Aut = Autochory); EG: Ecological Groups (P = Pioneers - pioneers and early secondary, NP = Non-Pioneers - late secondary and climax, WC = without characterization); ROW: row planting; NUC: nucleation; CO: control; Plant.: species originating from seedling planting, Reg.: Species originating from natural regeneration.
